Art Unit: 1761

Applicant's election without traverse of Group I, claims 1-14, 19-34, and 41-61, in the reply filed on April 10, 2007 is acknowledged.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-14, 19-34, and 41-61 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Blazey et al (US 6177118).

Blazey et al teach a method of making a cheese base and cheese comprising mixing milk or a milk derivative with citric acid to a pH of about 5.0 to 6.8 and ultrafiltering the treated milk (see entire document). Blazey et al also teach the addition of emulsifying salts and that the pH adjustment occurs without precipitation (see column 6, lines 56-63).

The claims differ as to the specific recitation of chelation.

Art Unit: 1761

Chelation is inherent and/or obvious to that of Blazey et al as the same components and process steps are used.

Moran et al (US 6183805) is noted as of interest to the claimed invention.
